

Our Decarbonisation Roadmap

Sappi Europe

Decarbonisation requires marshalling Sappi's expertise and ingenuity like never before. And it's a challenge that we're embracing with enthusiasm and determination.

Our European Decarbonisation Roadmap defines our path forward with ambitious priorities and projects to reduce emissions and optimise material and resource use in our nine mills across Europe.

Our priorities

The roadmap has three main priorities for action.

1. Exiting coal

This is where the biggest impact in emission reductions is possible. By exiting coal in three mills, we will shift to carbon neutral biomass or natural gas.

2. Green electricity

We've committed to procure more green electricity from the grid where it's available. This will reduce our Scope 2 emissions, especially at our three mills in Germany.

3. Eco-effectiveness

All nine mills are active with 'eco-effective' projects to improve energy efficiency and reduce emissions on an ongoing basis, investing in state-of-the-art technology and processes.

“Our decarbonisation roadmap gives us clarity on where to focus and helps set our trajectory towards the carbon-neutral future our planet and our business demand.”

Sarah Price, Director Sustainability
