

District Heating by Sappi

Gratkorn Mill

 Austria

The nearby city of Graz is warming up with eco-effective heat from Sappi. Instead of going to waste, we're supplying excess heat from our mill to the city via nine kilometres of underground pipes.

State-of-the-art heat pump technology was installed that enables the use of a higher proportion of low-temperature heat sources. This project is made possible with our partner thanks to an investment totalling €30 million.

“This project represents exactly the kind of eco-effective innovation that people join Sappi to contribute towards.”

Thomas Ladinek, Energy & Plant Optimization Utilities

Impact

carbon emissions by
20,000 tons
each year

Warming over **20,000** households for the **next 20 years**
