

Sustainably generated electricity

Maastricht Mill Netherlands

Today our 'e-boiler' runs on green electricity, generated from clean solar and wind.

With a capacity of 20MW and 2000h/year production time it will supply 13% of our steam demand. The production hours will increase over time, with a maximum potential of almost 50% of our steam demand.

“Green electricity is not in some distant future. At Sappi, we’re making sure it’s in the here and now.”

Ferdinand Koster, Mill Director
